

New Project

1. PROBLEM

We see a lot of trending AI tools and AI agent videos, but can't actually use it.

Let's say, for example, you always come to me and say that, "Raj, I saw this. Can we use it? How can we install it?" It's not only you, a lot of people are struggling with the same problem.

we see something video on reels or shorts, but we don't know how to use it. Only a developer or experienced AI expert can use it.

OR

we know there some AI buzz, AI can do this or that, help you in your business but don't know which one to use or where to go ?

2. WHY THIS PROBLEM EXISTS

Everything is just scatter around hugging & github, and a bunch tutorial to watch.

There are many supporting packages and libraries to install, just to run one tool

Everyone's focus is PowerUser & Developer, a big for Small business, non-technical content creator is left.

3. THE SOLUTION

So what I'm trying to propose is, why not make it simple ?

- A website where trending AI tools and AI agents are listed.
- Users can select any AI tool or agent.
- Each tool has a tutorial.
- The tutorial could be a video tutorial or a written doc.

- A desktop application for Windows and Mac to install & launch Ai tools & Agent.
- Basically Steam for Ai tools, like Steam install all libs & launch game in one view.
- One-Click Installation and Automatic Setup

A website to find and learn about Ai & Agents, and a installer & launcher for your desktop.

4. HOW IT WORKS

1. You see an AI tool or AI agent in a reel/video.
2. You visit our website.
3. You find that AI tool or agent.
4. You watch the tutorial.
5. You select the tool.
6. You install it using our desktop application.
7. All setup and you have a shortcut on your desktop to launch it.

For example, an AI agent might require:

- Python
- Specific Python libraries
- Other dependencies
- Other tools or system requirements

Instead of making the you figure all of that out, the application handles it automatically.

So this way, it will make AI much more easier & convenient to use for all the small businesses.

5. WHO IT IS FOR

Small businesses, Content Creator or Anyone who:

- See AI tools that could help them.
- Want to integrate AI into their business.
- Don't necessarily have technical expertise.
- Can't afford to hire an engineer just to set everything up.
- Don't want to make a large investment just to experiment with AI.

6. WHAT WE ARE BUILDING

We are not giving them AI that didn't exist before.

we're solving the gap between "I know this AI tool exists" and "I can actually get it running."

we are making existing AI accessible.

- You found a reel
- Discover that AI tool here.
- Learn how to use it.
- Install & Automatically configure it.
- Start using it.

A simple open-source community tool helping people understand & use AI without much technical expertise and the hassle of finding tutorials and installing each package to just run a tool.
